

1.50a4 changes

- \* Bug fix for new file crash when cue editor open and not top
- \* Changed "DMX Input..." to "Control Input", added persistent controls for new BlueLite network API
- \* Added data persistence to network API (apps using it can ask to save information in current showfile)
- \* LivePanel Network API now supports multiple, concurrent clients
- \* Live panel now had config menu entry to enable/disable network control

1.50a3 changes

- \* Capture feature no longer requires 'Compatibility Mode', works with old broadcast style and new multicast style discovery
- \* Special ArKaos VJ Artnet output mode has been removed
- \* Standard Artnet Output is now available in demo mode instead
- \* DMX Input for control now includes support for ArtNet Input, see Submasters/DMX Input menu selection
- \* Fixed bug where Template Editor would not display correctly on first run until resized
- \* New (and greatly expanded) network based Automation API for BlueLite and LivePanel
